

TGS-NOPEC Phase 49 PSDM Program Gravity Data Package

Fugro-LCT, in conjunction with TGS-NOPEC, is pleased to offer a subset of the Phase 49 gravity and bathymetry data package to enhance the Prestack Depth Migration seismic data package offered separately by TGS-NOPEC over the same survey lines. The new gravity data is all recorded with state of the art digital marine gravity instrumentation and DGPS positioning. Processing of the data was conducted by Fugro-LCT using the advanced DATAPRO™ processing system, recognized as the standard in the industry. All data is ready for immediate delivery in model-ready format.

Please contact Brian Anderson at (713) 369-6100 for more information.
